

A cycle of success for value-based care

Getting access to quality data is hard – but making that data actionable is a whole new challenge many health system leaders are encountering. Optum® Population Care Analytics and Optum® Patient Care Management work together to provide you with not only the most impactful, highest quality data for your organization, but also the insights, workflow support and performance measurement to make that data work for you.

Aggregating and curating data

Patient care management

See the whole patient, empower patients and care teams, and drive care management program scalability and performance to improve outcomes.

Coordinate care in the ambulatory environment **Create** effective care plans and patient engagement

Integrate with any EMR

Measure care coordination staff productively

Population care analytics

Predict risk, improve clinical and financial performance, increase efficiency and strengthen relationships with patients and health plans.

Target at-risk members for care coordination **Evaluate** quality of care and interventions

Quantify program costs and savings

i

Determine the effectiveness of care coordination programs

Yielding better outcomes

Using Population Care Analytics and Patient Care Management in tandem creates improved efficiency and better outcomes.

Leveraging the power of analytics to improve care for high-risk patients

Temple Health, a multi-hospital academic institution in Pennsylvania, wanted to better target high-risk patients for proactive care outreach. They used Population Care Analytics to identify highcost, high-risk patients and create targeted outreach lists through Optum Registry. Patients were then managed and monitored by care managers through Patient Care Management.

In 12 months, Temple Health achieved:

29%

decrease in patients with ED visits

16%

decrease in patients with hospital readmissions
